SHORTENED STATUTOR	Y PERIOD OF RESPONSE	NOTIFICATION DATE	DELIVERY MODE		
3 MO	NTHS	02/22/2007	ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Notice of this Office communication was sent electronically on the above-indicated "Notification Date" and has a shortened statutory period for reply of 3 MONTHS from 02/22/2007.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

Art Unit: 3746

DETAILED ACTION

Claim Objections

1. Claim 9 is objected to because of the following informalities: In lines 3 and 4, the phrase "thereof, to the valve seat portion an outer circumferential surface of the suction valve is hermetically adhered" should be changed to -- thereof; the valve seat portion is hermetically adhered to an outer circumferential surface of the valve--. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park 6,585,500 in view of Sproul 4,813,481.

Park discloses a valved piston for a reciprocating compressor comprising a valve mounting portion 12 formed at a piston and provided with at least one suction hole 12a through which a fluid introduced into a suction passage of the piston is supplied to a compression chamber of a cylinder; and a suction valve 20 mounted at the valve supporting body for opening and closing the suction hole 12a formed at the valve

Application/Control Number: 10/790,727

Art Unit: 3746

supporting body 12. However park fails to teach the following claimed limitations taught by Sproul.

Sproul (Fig. 3) teaches a flapper valve including a valve supporting body 70 inserted-fixed to a valve mounting portion 58 and provided with at least one hole through which a fluid may communicate through; and a valve 50 mounted at the valve supporting body 70 to be rotatable within a certain range, for opening and closing the hole formed at the valve supporting body 58. Sproul further teaches that the valve supporting body 70 is formed as a disc shape, an outer circumferential surface thereof is fixed to the valve mounting portion 58, and the valve supporting body is provided with a pin hole 112 for inserting a hinge pin so that the valve can be hinge-coupled.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the valve assembly of Park, by using a hinged valve in order to make the valve automatically closeable (Sproul, col. 2, lines 45-49).

4. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park 6,585,500 in view of Sproul 4,813,481 and in further view of Dickerson 4,850,059.

Park in view of Sproul disclose the invention as discussed above. However, Park in view of Sproul does not teach the following claimed limitations taught by Dickerson.

Dickerson teaches an apparatus for preventing backing up of sewage in a building comprising a valve supporting body 30, a valve 34, and valve mounting portion 21. Dickerson further teaches that the valve supporting body 30 is provided with at least one suction hole formed at one side on the basis of a pin hole 37, and is provided with a

Art Unit: 3746

stopper 34A formed at another side for preventing the valve 34 from being opened more than a certain range by stopping the valve. Dickerson also teaches that the stopper 34A is formed to have a certain inclination surface of which height becomes lower towards an edge of the valve supporting body from a center thereof (see Fig. 5).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the valve assembly of Park in view of Sproul, by implementing a stopper in order to prevent the valve from being moved into a vertical position (Dickerson, col. 3, lines 23-28).

5. Claims 5, 6, 7, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park 6,585,500 in view of Sproul 4,813,481 and in further view of Bloch 3,953,898.

Park in view of Sproul discloses the invention as discussed above as well as the slot, which receives the hinge pin, having a certain distance that the hinge pin is sliding-moved so that the suction valve can be linearly-moved within a certain range (Sproul, Figs. 10 and 10A). However, Park in view of Sproul does not teach the following claimed limitations taught by Bloch.

Bloch teaches a valve comprising a valve supporting body 15, a valve 18, and a hinge pin 19. Bloch further teaches that the valve has a disc shape, and is provided with a slot at a center thereof for inserting the hinge pin 19. Bloch also discloses that the valve 18 is provided with an open/close portion 18a formed at one side on the basis of the pin hole 19 for opening and closing the hole of the valve supporting body 15, and is provided with a stopping portion 18b formed at another side and stopped by the stopper 24 of the valve supporting body 15. Bloch further discloses the open/close portion 18a

Art Unit: 3746

of the valve 18 is formed to have a height higher than that of the stopping portion (see 29 attached to 18 in Fig. 2).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the valve assembly of Park in view of Sproul, by placing the slot for receiving the hinge pin at the center of the valve in order to create two opening of equal size thus allowing the fluid to flow freely and without restriction (Bloch, col. 3, lines 43-47).

6. Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park 6,585,500 i.v., Sproul 4,813,481 i.v., Bloch 3,953,898, and in view of Taylor-McCune 5,622,484.

Park i.v., Sproul in view of Bloch discloses the invention as discussed above. However, Park i.v., Sproul in view of Bloch does not teach the following claimed limitations taught by Taylor-McCune.

Taylor-McCune teaches a valve arrangement comprising a valve supporting body 14, a valve 16, and valve mounting portion 12. Taylor-McCune further teaches that the valve mounting portion 12 of the piston is provided with a valve seat portion 34 at an upper inner circumferential surface thereof; the valve seat portion 34 is hermetically adhered to an outer circumferential surface of the valve (see Fig. 2). Taylor-McCune also teaches that the valve seat portion 34 is formed as a curved surface form so that the valve can be rotated, and the outer circumferential surface of the valve 16 is also formed as a curved surface form corresponding to the valve seat portion 34.

Application/Control Number: 10/790,727 Page 6

Art Unit: 3746

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the valve assembly of Park i.v., Sproul in view of Bloch by having a curved portion of the valve mounting portion act as a valve seat for a curved surface of a valve in order to create a substantial an effective valve seal (Taylor-McCune, col. 6, lines 13-17).

Conclusion

- 7. The prior art made of record, noted in the attached form 892, and not relied upon is considered pertinent to applicant's disclosure.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter J. Bertheaud whose telephone number is (571) 272-3476. The examiner can normally be reached on M-F 9am 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ehud Gartenberg can be reached on (571) 272-4828. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
